

2 CLAMPING SYSTEMS

MTR

2.9 THREE – POSITION SWING CYLINDERS SERIES MTR

Four oil connections, 350 bar

Capacity: 56, 91 and 143 kN

Working pressure: 350 bar

Four oil connections

Temperature range: 5°C till 60°C

Horizontal 90 degrees rotation in extended clamping arm position.

DESCRIPTION

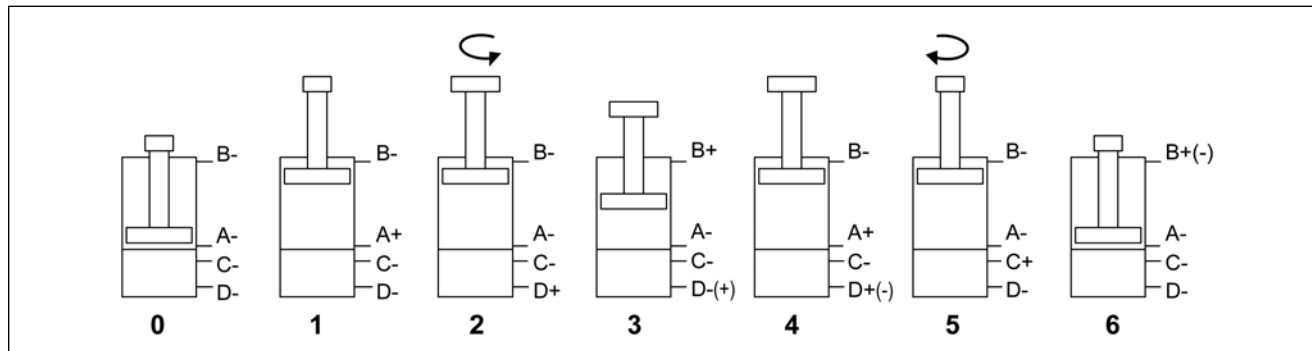

Double acting three position cylinders are designed to be integrated on machine tables and on moving bolsters. Due to the fact that the clamping arm is retracted completely and disappearing under the working table, the die load or unload surface becomes totally free.

Three position swing cylinders are particularly recommended when the application requires an integrated clamping solution on machine tables or when there is a narrow space and limited access.

Piston rotation is obtained through a mechanical device activated by two independent lines (ports C and D) while the straight action of the piston is provided by two other lines (ports A and B).

The clamping arm's position (clamped / unclamped) can be controlled by two proximity switches (to be ordered extra) while the straight stroke can be controlled by pressure switches. This cylinder guarantees a correct rotation of the arm avoiding inconveniences like jamming and cycle dephasing that would normally happen with similar products when the clamping arm bumps against the die.

For Viton seals (max 200°C) add V behind the model number. For example MTR-141-V.
